

IPLit Update June 2009

Injury Prevention Information Centre

Social and Community Health, School of Population Health
The University of Auckland

IPLit Update is a monthly bulletin to keep you up to date with the latest injury prevention research and best practice from New Zealand and around the world.

You are welcome to visit the Injury Prevention Information Centre and browse the collection.

The Injury Prevention Information Centre's website includes links to the IPLit – injury prevention literature database, INZED – the injury contacts directory and details for using the enquiry service.

Website at: <http://www.fmhs.auckland.ac.nz/soph/centres/ipic>
Gay Richards: email: injury@auckland.ac.nz or by phone: (09) 373 7599 x84640
Full contact details can be found at the end of IPLit Update

Upcoming Events

20 – 26 July Women's Refuge Awareness & Appeal Week

9 August International Day of Indigenous People

12 August Hoodie Day - United Nation's International Youth Day

7 September Safety NZ Week begins

Publications

IPLit Update Includes books, reports, articles, journals and newsletters received or accessed this month.

Active links to documents freely available on the web are provided, however web addresses can change. If the link does not work, try going to the homepage, shown at the beginning of the address and look for a publications or resources page, or contact me. DOIs are provided where available. These are permanent links to journal articles but unless the publisher provides free access to articles, you may only be able to reach the abstract via this link. IPNANZ members are reminded that they have free access to the *Injury Prevention* journal via the IPNANZ website – <http://www.ipnanz.org.nz> . If you have forgotten your IPNANZ login details, please contact Val Norton at IPNANZ: email: v.norton@ipnanz.org.nz or call 04 472 2562 The Injury Prevention Information Centre may be able to supply you with hard copies of resources listed here, but will be constrained by copyright in some cases. Your organisation's library may hold some of these resources or they can be obtained through your local public library via interlibrary loan. Please contact me if you have difficulty obtaining a particular item.

Search the [IPLit](#) database for injury prevention research resources selected for their relevance to the New Zealand environment. For more injury prevention articles from around the world, search [SafetyLit](#)

Healthy families, young minds and developing brains: enabling all children to reach their potential

[Report] Wellington, N.Z. Families Commission, May 2009, 66pp. ISBN: 978-0-478-37833-2

Research report 2/09

This study provides a critical overview of recent research into how minds and brains in young children develop, and some of its implications for families in

New Zealand. It particularly focuses on factors that enable children to reach their potential or prevent them from doing so, as they interact with each other and with their parents and caregivers.

CDC child injury report: patterns of unintentional injuries among 0-19 year olds in the United States, 2000 - 2006 [Report]

Atlanta, Ga. Centers for Disease Control and Prevention, National center for Injury Prevention and Control, December 2008, 116pp.

This report uses data from the United States National Vital Statistics System and the National Electronic Injury Surveillance System - All Injury Program to provide an overview of unintentional injuries related to drowning, falls, fires or burns, transportation-related injuries, poisoning, and suffocation, among others during the period 2000 - 2006. Results are presented by age group and sex, as well as the geographic distribution of injury death rates by state.

Diverted attention: crash statistics for the year ended 31 Dec 2007 [Fact sheet] Wellington, N.Z.

Ministry of Transport, July 2008, 6pp. Crash Factsheet 2008

An analysis of crash data to indicate the role played by diverted attention. This includes such activities as: talking with passengers; using cell-phones; eating and drinking; reaching or searching for objects in the vehicle; adjusting vehicle controls; adjusting the radio/in-vehicle entertainment system and changing CDs/cassettes; dealing with pets or animals in the vehicle; being emotionally upset/angry; smoking; rubber-necking; looking at scenery or advertising; watching or looking at other traffic or people; searching or looking for a location/intersection or specific place; being dazzled by sunstrike or headlights and taking action in response (i.e. adjusting sun visor); looking at other activity/events outside-of-the-vehicle. Cyclists and pedestrians may also be involved in distraction related crashes.

Global status report on road safety: time for action [Report] Geneva: World Health Organisation, 2009, 301pp. ISBN: 978 92 4 156384 0

This report is the first broad assessment of the road safety situation in 178 countries, using data drawn from a standardised survey. The results show that road traffic injuries remain an important public health problem, particularly for low-income and middle-income countries. Pedestrians, cyclists and motorcyclists make up almost half of those killed on the roads, highlighting the need for these road users to be given more attention in road safety programmes. The full report can be downloaded or to download by chapter - go to the website link below.

Online at: http://whqlibdoc.who.int/publications/2009/9789241563840_eng.pdf

Website: http://www.who.int/violence_injury_prevention/road_safety_status/report/en/index.html

National Center for Injury Prevention and Control.

Recommendations from the expert panel: advanced automatic collision notification and triage of the injured patient [Report] Atlanta, Ga. Centers for Disease Control and Prevention (CDC) 2009, 20pp.

"The panel considered how real-time crash data from the advanced automatic crash notification (AACN) vehicle telematics system and similar systems can be used to determine whether injured patients need care at a trauma center. By using a collection of sensors, vehicle telemetry systems like AACN send crash data to an advisor if a vehicle is involved in a moderate or severe front, rear, or side-impact crash."
