

IPLit Update July 2008

Injury Prevention Information Centre
Social and Community Health, School of Population Health
University of Auckland

IPLit Update is a monthly bulletin to keep you up to date with the latest injury prevention research and best practice from New Zealand and around the world.

You are welcome to visit the Injury Prevention Information Centre and browse the collection.

The Injury Prevention Information Centre's website includes links to the IPLit – injury prevention literature database, INZED – the injury contacts directory and details for using the enquiry service.

Website at: <http://www.fmhs.auckland.ac.nz/soph/centres/ipic>

Gay Richards: email: injury@auckland.ac.nz or by phone: (09) 373 7599 x84640
Full contact details can be found at the end of IPLit Update

Publications

IPLit Update Includes books, reports, articles, journals and newsletters received or accessed this month. Active links to documents freely available on the web are provided, however web addresses can change. If the link does not work, try going to the homepage, shown at the beginning of the address and look for a publications or resources page, or contact me. DOIs are provided where available. These are permanent links to journal articles but unless the publisher provides free access to articles, you may only be able to reach the abstract via this link. IPNANZ members are reminded that they have free access to the *Injury Prevention* journal via the IPNANZ website – <http://www.ipnanz.org.nz> . If you have forgotten your IPNANZ login details, please contact Val Norton at IPNANZ: email: v.norton@ipnanz.org.nz or call 04 472 2562 The Injury Prevention Information Centre may be able to supply you with hard copies of resources listed here, but will be constrained by copyright in some cases. Your organisation's library may hold some of these resources or they can be obtained through your local public library via interlibrary loan. Please contact me if you have difficulty obtaining a particular item.

Search the [IPLit](#) database for injury prevention research resources selected for their relevance to the New Zealand environment. For more injury prevention articles from around the world, search [SafetyLit](#)

The contribution of alcohol to falls at home among working-aged adults [Article]

Alcohol, 2008, epub.

This paper reports the findings from the Auckland Falls Study, a population-based case-control study designed to identify modifiable risk factors for unintentional falls at home resulting in death or admission to hospital among working-age adults (25 to 60 years). This study was conducted by researchers at The University of Auckland. This article has also been summarised in IPIC Research Bulletin no.3 - see first link below, if you cannot access the full article.

Hallam, A.

The effectiveness of interventions to address health inequalities in the early years: a review of relevant literature [Report] Edinburgh, Scotland: Scottish Government, 2008, 152pp.

This paper analyses data from a number of sources, including publications/work in progress recommended and/or produced by staff within the Scottish Government, NHS Health Scotland and those conducting relevant research within universities and other organisations across Scotland. Section 3.5 considers interventions to reduce accidents and injuries, not just in the birth years. Other sections consider the effectiveness of home visiting, interventions to prevent the misuse of alcohol and other drugs and to reduce neglect and many other initiatives to reduce health inequalities. The document can be read by chapter rather than downloading the full pdf file - use the website link.

Chea, H., Webster, A.

Evaluating the Code of Practice for child-resistant packaging of toxic substances: a summer research project [Report] Dunedin, N.Z. University of Otago, 1999, 101pp. CAPFNZ report

This project was funded through the Child Accident Prevention Foundation of New Zealand 1998-1999 Summer Research Scholarship. Three surveys were conducted to evaluate this voluntary Code of Practice which came into force in June 1998. Survey 1 identified the types of products subject to the code and examined their current packaging. Survey 2 ascertained manufacturers' and/ or distributors' view on the Code and its implications using a postal survey. Survey 3 reported on local retailers' understanding of, and opinions on, an exemption clause in the Code relating to people with disabilities.

National Centre for Injury Prevention and Control

Preventing falls: how to develop community-based fall prevention programs for older adults [Report] Atlanta, Ga. National Center for Injury Prevention and Control, Centers for Disease Control and Prevention, 2008, 100pp.

This "how-to" guide is designed for community-based organisations who are interested in developing their own effective fall prevention programmes. This guide is designed to be a practical and useful tool, and it provides guidelines on programme planning, development, implementation, and evaluation. This guide also includes helpful information on building and maintaining community partnerships and promoting, evaluating, and sustaining fall prevention programmes. The appendices include practical assessments, worksheets, presentations, and templates. Although written for the United States environment, it should be a useful resources for people working in fall prevention in New Zealand.

Preventing falls: what works. A CDC compendium of effective community-based interventions from around the world [Report] Atlanta, Ga. National Center for Injury Prevention and Control, Centers for Disease Control and Prevention, 2008, 102pp.

This publication describes 14 scientifically tested and proven interventions, and provides relevant details about these interventions for organisations who want to implement fall prevention programs. The interventions are grouped into three categories: 1) exercise-based, 2) home modification, and 3) multifaceted. Each intervention description includes a short summary of the research study and results, as well as a longer section describing the intervention. Descriptions include information about the following. Tai Chi and the Otago Exercise Programme are among the programmes featured.

Activity and place - Is it necessary both to identify sports and leisure injury cases in ICD-coded data? [Article]

International Journal of Injury Control and Safety Promotion, 2008, 15(2); 119-121

This paper explores the relationship between ICD-10-AM activity and place codes for the identification of sport/leisure injuries. In Australia and New Zealand, hospitalisation data are coded according to the Australian modification of ICD-10 (ICD-10-AM). The ICD-10-AM is unique in that it has over 200 activity codes identifying sport/leisure activities, in addition to place of occurrence code indicating sport/athletics area.

National Centre for Injury Prevention and Control.

Preventing falls: how to develop community-based fall prevention programs for older adults [Report] Atlanta, Ga. National Center for Injury Prevention and Control, Centers for Disease Control and Prevention, 2008, 100pp.

This "how-to" guide is designed for community-based organisations who are interested in developing their own effective fall prevention programmes. This guide is designed to be a practical and useful tool, and it provides guidelines on programme planning, development, implementation, and evaluation. This guide also includes helpful information on building and maintaining community partnerships and promoting, evaluating, and sustaining fall prevention programmes. The appendices include practical assessments, worksheets, presentations, and templates. Although written for the United States environment, it should be a useful resources for people working in fall prevention in New Zealand.

Preventing falls: what works. A CDC compendium of effective community-based interventions from around the world [Report] Atlanta, Ga. National Center for Injury Prevention and Control, Centers for Disease Control and Prevention, 2008, 102pp.

This publication describes 14 scientifically tested and proven interventions, and provides relevant details about these interventions for organisations who want to implement fall prevention programs. The interventions are grouped into three categories: 1) exercise-based, 2) home modification, and 3) multifaceted. Each intervention description includes a short summary of the research study and results, as well as a longer section describing the intervention. Descriptions include information about the following. Tai Chi and the Otago Exercise Programme are among the programmes featured.

Hallam, A.

The effectiveness of interventions to address health inequalities in the early years: a review of relevant literature [Report] Edinburgh, Scotland: Scottish Government, 2008, 152pp.

This paper analyses data from a number of sources, including publications/work in progress recommended and/or produced by staff within the Scottish Government, NHS Health Scotland and those conducting relevant research within universities and other organisations across Scotland. Section 3.5 considers interventions to reduce accidents and injuries, not just in the birth years. Other sections consider the effectiveness of home visiting, interventions to prevent the misuse of alcohol and other drugs and to reduce neglect and many other initiatives to reduce health inequalities. The document can be read by chapter rather than downloading the full pdf file - use the website link.

A randomized controlled trial to prevent non contact anterior cruciate ligament injury in female collegiate soccer players [Article]

American Journal of Sports Medicine, 2008, 36: 1476-1484

The findings from this study suggest that the PEP programme shows promise for reducing the risk of non-contact anterior cruciate ligament (ACL) injuries in female college soccer players. The programme used an alternative warm-up program focusing on neuromuscular techniques (stretching, strengthening, and improving biomechanics). The warm-up program studied was the Prevent Injury and Enhance Performance (PEP) program, developed by the Santa Monica Orthopedic and Sports Medicine Research Foundation. This programme could be modified to be useful for other sports such as basketball and volleyball. See the weblink for more information about this programme.

Risk and severity of injury in a population of BASE jumpers [Article]

New Zealand Medical Journal, 4 July 2008, 121(1277): 3134

This survey of 35 BASE jumpers, an extreme sport, practised in New Zealand and around the world, aimed to determine the frequency and severity of injuries and accidents among experienced BASE jumpers, and to determine BASE jumpers demographic and psychological characteristics. The researchers based in New Zealand and Israel respectively recruited participants from the BASE jumper community around the world.

Activity and place - Is it necessary both to identify sports and leisure injury cases in ICD-coded data? [Article]

International Journal of Injury Control and Safety Promotion, 2008, 15(2); 119-121

This paper explores the relationship between ICD-10-AM activity and place codes for the identification of sport/leisure injuries. In Australia and New Zealand, hospitalisation data are coded according to the Australian modification of ICD-10 (ICD-10-AM). The ICD-10-AM is unique in that it has over 200 activity codes identifying sport/leisure activities, in addition to place of occurrence code indicating sport/athletics area.

Distractive effects of cellphone use [Report] Wellington, N.Z. Land Transport New Zealand, July 2008, 52pp. 0-478--30979-9 Land Transport research report, 349

The goal of the study was to identify any differences between drivers' cellphone conversations and conversations with passengers in terms of their effects on driving performance. The participants drove a 25.3km-long simulated road containing five hazards and an overtaking lane using the University of Waikato driving simulator. The results clearly indicated that driving while talking to an in-car passenger was appreciably different from conversing over a cellphone.

New

26-28 July 2008, Melbourne, Australia

9th National Conference on Injury Prevention and Safety Promotion.

Theme: "Applying the Science: An Integrated Approach" with an emphasis on translating new knowledge into practice by exploring links between forensic medicine, coroners' investigations and the prevention of injury. The international keynote speaker for the conference is renowned US injury prevention expert, Dr Nancy Stout, Director of the Division of Safety Research at America's National Institute for Occupational Safety and Health (NIOSH). The 2nd Announcement Call for Abstracts Brochure will be available from 14 August 2008, with abstracts due for submission by 10 November 2008. To register your interest in the conference please contact Monash University Conference and Events Management Office at

oce@adm.monash.edu.au
