

IPLit Update October 2008

Injury Prevention Information Centre
Social and Community Health, School of Population Health
The University of Auckland

IPLit Update is a monthly bulletin to keep you up to date with the latest injury prevention research and best practice from New Zealand and around the world.

You are welcome to visit the Injury Prevention Information Centre and browse the collection.

The Injury Prevention Information Centre's website includes links to the IPLit – injury prevention literature database, INZED – the injury contacts directory and details for using the enquiry service.

Website at: <http://www.fmhs.auckland.ac.nz/soph/centres/ipic>

Gay Richards: email: injury@auckland.ac.nz or by phone: (09) 373 7599 x84640
Full contact details can be found at the end of IPLit Update

Upcoming Events

16 November World Day of Remembrance for Road Traffic Victims

[Find out more](#)

25 November White Ribbon Day [Find out more](#)

Publications

IPLit Update Includes books, reports, articles, journals and newsletters received or accessed this month. Active links to documents freely available on the web are provided, however web addresses can change. If the link does not work, try going to the homepage, shown at the beginning of the address and look for a publications or resources page, or contact me. DOIs are provided where available. These are permanent links to journal articles but unless the publisher provides free access to articles, you may only be able to reach the abstract via this link. IPNANZ members are reminded that they have free access to the *Injury Prevention* journal via the IPNANZ website – <http://www.ipnanz.org.nz> . If you have forgotten your IPNANZ login details, please contact Val Norton at IPNANZ: email: v.norton@ipnanz.org.nz or call 04 472 2562 The Injury Prevention Information Centre may be able to supply you with hard copies of resources listed here, but will be constrained by copyright in some cases. Your organisation's library may hold some of these resources or they can be obtained through your local public library via interlibrary loan. Please contact me if you have difficulty obtaining a particular item.

Search the [IPLit](#) database for injury prevention research resources selected for their relevance to the New Zealand environment. For more injury prevention articles from around the world, search [SafetyLit](#)

Bentzen, H., Bergland, A., Forsen, L.

Risk of hip fractures in soft protected, hard protected, and unprotected falls [Article]
Injury Prevention, October 2008, 14(5): 306 - 310

An observational study was conducted among 18 nursing homes in Norway. Nursing homes were randomised to provide either soft or hard hip protection. This study found that both types of hip protection have potential to reduce the risk of a hip fracture if worn correctly. The hip fracture risk in soft and hard protected falls was almost 60% lower than in unprotected falls.

Illnesses and injuries related to total release foggers - eight states, 2001 - 2006 [Article]

Morbidity and Mortality Weekly Report: MMWR, 17 October 2008, 57(41): 1125-1129

Total release foggers (TRFs), or pest bombs, are pesticide products designed to fill an area in a home or workplace with insecticides to kill cockroaches, fleas, and flying insects. Most TRFs contain pyrethroid, pyrethrin, or both as active ingredients. TRFs also contain flammable aerosol propellants that can cause fires or explosions. The magnitude and range of acute health problems associated with TRF usage has not been described previously. This report summarizes illnesses and injuries that were associated with exposures to TRFs during 2001--2006 in eight states (California, Florida, Louisiana, Michigan, New York, Oregon, Texas, and Washington) and were investigated by the California Department of Pesticide Regulation (CDPR) and state health departments participating in the SENSOR-Pesticides program. The findings indicate that TRFs pose a risk for acute, usually temporary health effects among users and bystanders. To reduce the risk for TRF-related health effects, integrated pest management control strategies that prevent pests' access to food, water, and shelter need to be promoted and adopted. In addition, awareness of the hazards and proper use of TRFs need to be better communicated on TRF labels and in public media campaigns.

Illnesses and injuries related to total release foggers - eight states, 2001 - 2006 [Article]

Morbidity and Mortality Weekly Report: MMWR, 17 October 2008, 57(41): 1125-1129

Total release foggers (TRFs), or pest bombs, are pesticide products designed to fill an area in a home or workplace with insecticide ces to kill cockroaches, fleas, and flying insects. Most TRFs contain pyrethroid, pyrethrin, or both as active ingredients. TRFs also contain flammable aerosol propellants that can cause fires or explosions. The magnitude and range of acute health problems associated with TRF usage has not been described previously. This report summarizes illnesses and injuries that were associated with exposures to TRFs during 2001--2006 in eight states (California, Florida, Louisiana, Michigan, New York, Oregon, Texas, and Washington) and were investigated by the California Department of Pesticide Regulation (CDPR) and state health departments participating in the SENSOR-Pesticides program. The findings indicate that TRFs pose a risk for acute, usually temporary health effects among users and bystanders. To reduce the risk for TRF-related health effects, integrated pest management control strategies that prevent pests' access to food, water, and shelter need to be promoted and adopted. In addition, awareness of the hazards and proper use of TRFs need to be better communicated on TRF labels and in public media campaigns.

Preventing unintentional farm injury [Article]

Hazard, Spring 2008, no.68: 1-21

A profile of unintentional farm injury in Victoria, Australia, including deaths, hospitalisations and emergency department presentations for the period 2004 -2006. There is a detailed analysis of all farm injury, work-related farm injury and farm injury among vulnerable groups - children and young people 0-19 years, and older people, 65 plus. A literature review identifying the risk factors for farm injury and evidence-based prevention measures is also included.

Risk of hip fractures in soft protected, hard protected, and unprotected falls [Article]

Injury Prevention, October 2008, 14(5): 306 - 310

An observational study was conducted among 18 nursing homes in Norway. Nursing homes were randomised to provide either soft or hard hip protection. This study found that both types of hip protection have potential to reduce the risk of a hip fracture if worn correctly. The hip fracture risk in soft and hard protected falls was almost 60% lower than in unprotected falls.

Injuries resulting from car surfing - United States 1990 - 2008 [Article]

Morbidity and Mortality Weekly Report: MMWR, 17 October 2008, 57(41): 1121-1124

This report is the first to describe car-surfing injuries from a national perspective. It suggests that injury resulting from this activity has been a persistent occurrence among teens in the United States and might occur in regional and seasonal patterns. Despite the potentially lethal consequences of this activity, car surfing shows no evidence of decreasing popularity.

Cohort differences in the progression of developmental pathways: evidence for period effects in secular trends of violence in males [Article]

Injury Prevention, October 2008, 14(5): 311 - 318

Two cohorts of male adolescents from the Pittsburgh Youth Study were studied. It was found that there was no statistically significant difference between the cohorts in progression from minor aggression to physical fighting.

Injuries resulting from car surfing - United States 1990 - 2008 [Article]

Morbidity and Mortality Weekly Report: MMWR, 17 October 2008, 57(41): 1121-1124

This report is the first to describe car-surfing injuries from a national perspective. It suggests that injury resulting from this activity has been a persistent occurrence among teens in the United States and might occur in regional and seasonal patterns. Despite the potentially lethal consequences of this activity, car surfing shows no evidence of decreasing popularity.

Green, J.A.

Partying on? Life after BZP-based party pills [Article]

New Zealand Medical Journal, 3 October 2008, 121(1283), 8pp.

119 students were surveyed in order to determine whether the banning of BZP was likely to increase illegal drug use. The findings suggest that it might.

Cassell, E., Clapperton, A., Reid, N.

Preventing unintentional farm injury [Article]

Hazard, Spring 2008, no.68: 1-21

A profile of unintentional farm injury in Victoria, Australia, including deaths, hospitalisations and emergency department presentations for the period 2004 -2006. There is a detailed analysis of all farm injury, work-related farm injury and farm injury among vulnerable groups - children and young people 0-19 years, and older people, 65 plus. A literature review identifying the risk factors for farm injury and evidence-based prevention measures is also included.
