

IPLit Update

November 2007

Injury Prevention Information Centre
Social and Community Health, School of Population Health
University of Auckland

IPLit Update is a monthly bulletin to keep you up to date with the latest injury prevention research and best practice from New Zealand and around the world.

The IPLit database of all reports, articles and other resources indexed since the early 1990s and a list of all IPRC publications can now be accessed from the IPIC homepage at:

http://iplit.fmhs.auckland.ac.nz/search_menu.htm . This is a new page which links to the IPLit and INZED search pages, which all have a new look with Simple and Advanced search functions.

A guide to the IPLit database is at: http://www.health.auckland.ac.nz/ipc/pdf/rb1_jun_07_iplit.pdf

You are welcome to visit the Injury Prevention Information Centre and browse the collection.

The Injury Prevention Information Centre provides an enquiry service
please contact me by email or telephone.

Gay Richards: email: injury@auckland.ac.nz or by phone: (09) 373 7599 x84640

Access the IPLit and INZED databases at: http://iplit.fmhs.auckland.ac.nz/search_menu.htm

Full contact details can be found at the end of IPLit Update

Publications

IPLit Update Includes books, reports, articles, journals and newsletters received or accessed this month. Active links to documents freely available on the web are provided, however web addresses can change. If the link does not work, try going to the homepage, shown at the beginning of the address and look for a publications or resources page, or contact me. DOIs are provided where available. These are permanent links to journal articles but unless the publisher provides free access to articles, you may only be able to reach the abstract via this link. **IPNANZ members are reminded that they have free access to the *Injury Prevention* journal via the IPNANZ website – <http://www.ipn.org.nz> . If you have forgotten your IPNANZ login details, please contact Val Norton at IPNANZ: email: v.norton@ipn.org.nz or call 04 472 2562** The Injury Prevention Information Centre may be able to supply you with hard copies of resources listed here, but will be constrained by copyright in some cases. Your organisation's library may hold some of these resources or they can be obtained through your local public library via interlibrary loan. Please contact me if you have difficulty obtaining a particular item. **Search the [IPLit](#) database for injury prevention research resources selected for their relevance to the New Zealand environment. For more injury prevention articles from around the world, search [SafetyLit](#)**

Interventions for preventing injuries in the construction industry [Cochrane Review]

The Cochrane Database of Systematic Reviews, 2007, Issue 4

Authors' conclusions: "The vast majority of technical, human factors and organisational interventions which are recommended by standard texts of safety, consultants and safety courses, have not been adequately evaluated. There is no evidence that regulations for reducing fatal and non-fatal injuries are effective. There is limited evidence that a multifaceted safety campaign and a multifaceted drug program can reduce non-fatal injuries in the construction industry."

Restrictions on the sale and supply of alcohol: evidence and outcomes [Literature review] Sherton Park, WA: National Drug Research Institute, Curtin University of Technology, 2007, 259pp. 1 74067 533 9

This study reviews the evidence for the effectiveness of various means of limiting the availability of alcohol. While international evidence is reviewed the study focuses on those interventions which appear to be most effective in the Western Australian context with particular regard to the effectiveness of reducing alcohol related harm in remote and indigenous communities.

Caritas Aotearoa New Zealand.

Delivering the goods: responses to a survey of newspaper and delivery workers aged 10 - 16 years: 2006 [Report] Wellington, N.Z. Caritas Aotearoa New Zealand, 2007, 58pp. 0-908631-39-1

In 2006 Caritas Aotearoa New Zealand, a Catholic social justice agency conducted a survey of 30 young delivery workers attending Catholic schools from Westport to Wairarapa, including the Wellington region. This qualitative study aimed to provide information on children's and young people's participation and protection in this type of work. It follows a 2003 study which investigated children's and young people's work experiences around New Zealand. Exposure to work related injury is one issue identified by this research.

Mental health promotion and illness prevention in school settings [Electronic source] Auseinet, 2007,

This settings and populations series to be published by Auseinet will provide access to information concerning 'what we know' about mental health promotion and illness prevention approaches for a range of population groups and in a variety of settings. Each package covers: The evidence, rationale and benefits of incorporating promotion and prevention approaches within the relevant population group or setting; Programs/implementation strategies; Relevant Australian policy; Examples of good practice; Key resources and links. While policy and practice may differ in New Zealand, this easy to access information may prove a good starting point for those with an interest in promoting mental health as part of injury prevention.

Young people and mental health: novel methods for systematic review of research on barriers and facilitators [Article]

Health Education Research, 2007, ePub

This paper describes how barriers to, and facilitators of, good mental health amongst young people (11-21 years) were extracted from a systematic review of studies of young people's views. These factors were then compared with effectiveness studies to identify effective or promising interventions. Studies covered an age range from 11 - 21 years.

Report on available evidence about preventing injury to young people including a systematic review of the evidence of preventing work and sports related injury to young people aged 15 to 24 years.

[Literature review] Sydney, NSW: Youthsafe, June 2007, 124pp.

This report was developed as an update of the Youthsafe report, published in 2000 on a systematic review of the evidence on preventing injuries to young people aged 15-24 years. According to the authors, a significant review of the literature specifically addressing youth injury prevention has not been undertaken since that time. This review was commissioned to inform Youthsafe of the current state of the evidence, regarding the prevention of injuries to young people aged 15-24 years with a focus on road, work, sport and recreational injuries and to assist in informing others, based on published and unpublished studies of acceptable quality. Youthsafe is based in New South Wales, Australia.

The UK burden of injury study - a protocol [Article]

BMC Public Health, 2007, 7(1): 317

This article describes the methodology to be used in a proposed longitudinal, multicentre study to measure the burden of injury in the United Kingdom. Measures of health service utilisation, impairment, disability, and health related quality of life will be surveyed with follow ups at 1, 4 and 12 months and compared with baseline data.

Monitoring the health of New Zealand children and young people: indicator handbook. [Report]

Auckland, N.Z. Paediatric Society of New Zealand New Zealand Child and Youth Epidemiology Service, 2007, 448pp.

Information from many sectors and non-government organisations has been combined to produce a set of child and youth health indicators and reports which highlight factors influencing health, and indicating opportunities for early intervention. This is one of two reports commissioned by the Ministry of Health. The indicators presented in this Handbook, although the authors suggest some may be imperfect, represent the currently available information on the health of children and young people in New Zealand. Sections of particular interest to the injury prevention sector: Alcohol related harm, p.173-8; Most frequent causes of hospital admissions and mortality, p.183-6; Safety: Total and unintentional injuries, Injuries arising from assault, CYF Notifications, Family Violence, 229-62; Self harm and suicide, p.371-4

Mental health promotion and illness prevention in school settings [Electronic source]

Auseinet, 2007,

This settings and populations series to be published by Auseinet will provide access to information concerning 'what we know' about mental health promotion and illness prevention approaches for a range of population groups and in a variety of settings. Each package covers: The evidence, rationale and benefits of incorporating promotion and prevention approaches within the relevant population group or setting; Programs/implementation strategies; Relevant Australian policy; Examples of good practice; Key resources and links. While policy and practice may differ in New Zealand, this easy to access information may prove a good starting point for those with an interest in promoting mental health as part of injury prevention.

Young people and mental health: novel methods for systematic review of research on barriers and facilitators [Article]

Health Education Research, 2007, ePub

This paper describes how barriers to, and facilitators of, good mental health amongst young people (11-21 years) were extracted from a systematic review of studies of young people's views. These factors were then compared with effectiveness studies to identify effective or promising interventions. Studies covered an age range from 11 - 21 years.

Delivering the goods: responses to a survey of newspaper and delivery workers aged 10 - 16 years: 2006 [Report] Wellington, N.Z. Caritas Aotearoa New Zealand, 2007, 58pp. 0-908631-39-1

In 2006 Caritas Aotearoa New Zealand, a Catholic social justice agency conducted a survey of 30 young delivery workers attending Catholic schools from Westport to Wairarapa, including the Wellington region. This qualitative study aimed to provide information on children's and young people's participation and protection in this type of work. It follows a 2003 study which investigated children's and young people's work experiences around New Zealand. Exposure to work related injury is one issue identified by this research.

Projecting effects of improvements in passive safety of the New Zealand light vehicle fleet [Article]

Traffic Injury Prevention, September 2007, 8(3): 275-280

This paper describes a methodology for projecting changes in casualty rates associated with passive safety features, based primarily on projections of the existing crashworthiness trends. Two potential interventions were considered: restriction on the importation of cars into New Zealand and restriction of government fleet vehicles to those with superior crashworthiness. However compared with the expected improvements over time these interventions appear to yield fairly modest savings. This research was funded by Land Transport New Zealand. The full report on which this paper is based can be downloaded via the weblink below.

Preliminary evaluation of electronic stability control effectiveness in Australasia [Report] Melbourne,

Vic. Monash University Accident Research Centre, October 2007, vii, 58pp.. 0-7326-2341-3 Report 271

The aim of this study was to use available crash data from Australia and New Zealand to evaluate the effectiveness of electronic stability control (ESC) systems in reducing crash risk and to establish whether benefits estimated from overseas studies have translated to the Australian and New Zealand environments. It was found that the fitting of ESC to vehicles in the Australian and New Zealand fleet was associated with a statistically significant 32% reduction in the risk of single vehicle crashes in which the driver was injured. ESC was found to be particularly effective in 4WD vehicles.

Delivering the goods: responses to a survey of newspaper and delivery workers aged 10 - 16 years: 2006 [Report] Wellington, N.Z. Caritas Aotearoa New Zealand, 2007, 58pp. 0-908631-39-1

In 2006 Caritas Aotearoa New Zealand, a Catholic social justice agency conducted a survey of 30 young delivery workers attending Catholic schools from Westport to Wairarapa, including the Wellington region. This qualitative study aimed to provide information on children's and young people's participation and protection in this type of work. It follows a 2003 study which investigated children's and young people's work experiences around New Zealand. Exposure to work related injury is one issue identified by this research.

Mental health promotion and illness prevention in school settings [Electronic source] Auseinet, 2007,

This settings and populations series to be published by Auseinet will provide access to information concerning 'what we know' about mental health promotion and illness prevention approaches for a range of population groups and in a variety of settings. Each package covers: The evidence, rationale and benefits of incorporating promotion and prevention approaches within the relevant population group or setting; Programs/implementation strategies; Relevant Australian policy; Examples of good practice; Key resources and links. While policy and practice may differ in New Zealand, this easy to access information may prove a good starting point for those with an interest in promoting mental health as part of injury prevention.

Monitoring the health of New Zealand children and young people: indicator handbook. [Report] Auckland, N.Z. Paediatric Society of New Zealand New Zealand Child and Youth Epidemiology Service, 2007, 448pp.

Information from many sectors and non-government organisations has been combined to produce a set of child and youth health indicators and reports which highlight factors influencing health, and indicating opportunities for early intervention. This is one of two reports commissioned by the Ministry of Health. The indicators presented in this Handbook, although the authors suggest some may be imperfect, represent the currently available information on the health of children and young people in New Zealand. Sections of particular interest to the injury prevention sector: Alcohol related harm, p.173-8; Most frequent causes of hospital admissions and mortality, p.183-6; Safety: Total and unintentional injuries, Injuries arising from assault, CYF Notifications, Family Violence, 229-62; Self harm and suicide, p.371-4

Protecting children at work. Responses to a survey of the work experiences of students at Catholic schools 10-17 years old, years 9-13: 2003 [Report] Wellington, N.Z. Caritas Aotearoa New Zealand, 2003, 51pp. 0-908631-35-4

In 2003 Caritas Aotearoa New Zealand, a Catholic social justice agency conducted a survey of children attending Catholic schools around New Zealand, to provide indicative data on the amount of paid work being undertaken by young people and the level of employment protection they received. 4864 responses were received. Information on work related injuries as defined by the respondents was collected. Further research on young delivery workers was conducted in 2006.

Hunter, K., Elkington, J.

Report on available evidence about preventing injury to young people including a systematic review of the evidence of preventing work and sports related injury to young people aged 15 to 24 years.

[Literature review] Sydney, NSW: Youthsafe, June 2007, 124pp.

This report was developed as an update of the Youthsafe report, published in 2000 on a systematic review of the evidence on preventing injuries to young people aged 15-24 years. According to the authors, a significant review of the literature specifically addressing youth injury prevention has not been undertaken since that time. This review was commissioned to inform Youthsafe of the current state of the evidence, regarding the prevention of injuries to young people aged 15-24 years with a focus on road, work, sport and recreational injuries and to assist in informing others, based on published and unpublished studies of acceptable quality. Youthsafe is based in New South Wales, Australia.

Oliver, S., Harden, A., Rees, R., Shepherd, J., Burton, G., Oakley, A.

Young people and mental health: novel methods for systematic review of research on barriers and facilitators [Article]

Health Education Research, 2007, ePub

This paper describes how barriers to, and facilitators of, good mental health amongst young people (11-21 years) were extracted from a systematic review of studies of young people's views. These factors were then compared with effectiveness studies to identify effective or promising interventions. Studies covered an age range from 11 - 21 years.
