

IPLit Update

December 2009

Injury Prevention Information Centre

Social and Community Health, School of Population Health
The University of Auckland

IPLit Update is a monthly bulletin to keep you up to date with the latest injury prevention research and best practice from New Zealand and around the world.

You are welcome to visit the Injury Prevention Information Centre and browse the collection.

The Injury Prevention Information Centre's website includes links to the IPLit – injury prevention literature database, INZED – the injury contacts directory and details for using the enquiry service.

Website at: <http://www.fmhs.auckland.ac.nz/soph/centres/ipic>
Gay Richards: email: injury@auckland.ac.nz or by phone: (09) 373 7599 x84640
Full contact details can be found at the end of IPLit Update

Upcoming Conferences, Courses & Events

Injury Prevention Events Calendar

This calendar replaces the Upcoming Events listing and the list of courses and conferences at the end of this alert. Bookmark it today. [Email](#) details of upcoming events – events of interest to the injury prevention sector for professional development or public awareness raising – to be added to the calendar.

New events are being added every week.
The IP Calendar includes events being held around New Zealand and overseas.
Something for every budget. Please check regularly.
Use the Agenda function (top right on the Calendar) to see future events at a glance.

Publications

IPLit Update Includes books, reports, articles, journals and newsletters received or accessed this month.

Active links to documents freely available on the web are provided, however web addresses can change. If the link does not work, try going to the homepage, shown at the beginning of the address and look for a publications or resources page, or contact me. DOIs are provided where available. These are permanent links to journal articles but unless the publisher provides free access to articles, you may only be able to reach the abstract via this link. IPNANZ members are reminded that they have free access to the *Injury Prevention* journal via the IPNANZ website – <http://www.ipnanz.org.nz> . If you have forgotten your IPNANZ login details, please contact Val Norton at IPNANZ: email: v.norton@ipnanz.org.nz or call 04 472 2562 The Injury Prevention Information Centre may be able to supply you with hard copies of resources listed here, but will be constrained by copyright in some cases. Your organisation's library may hold some of these resources or they can be obtained through your local public library via interlibrary loan. Please contact me if you have difficulty obtaining a particular item.

Search the [IPLit](#) database for injury prevention research resources selected for their relevance to the New Zealand environment. For more injury prevention articles from around the world, search [SafetyLit](#)

Latest issue: **December 2009, no.47, 4pp.**

Child injury prevention tips and news from the Wanganui Child Injury Prevention Project

In this issue: Toy safety guidelines; Free artwork; Be sunsmart; Summer cycle safety; the great kiwi road trip; Fire awareness and intervention; Beach cleanup; Retiring from Safekids Worldwide, Dr Martin Eichelberger; Project news.

Location: Journals - Miscellaneous

Evaluation

8449

Evaluation of Youth One Stop Shops: final report [Report]

Communio, November 2009, 206pp.

The evaluation found that the fourteen YOSS provide a range of accessible, youth-friendly health and social services at little or no cost to young people. Youth specific services have evolved in response to local demand and have been supported by a range of funders and health providers. The most common health services provided include primary health care, sexual and reproductive health, family planning and mental health services. The majority of clients are aged between 15 and 24 years. Service utilisation is greater amongst females. A high percentage of Māori access services.

Online at: [http://www.moh.govt.nz/moh.nsf/pagesmh/9754/\\$File/youth-one-stop-shop-evaluation-report-v1.1.pdf](http://www.moh.govt.nz/moh.nsf/pagesmh/9754/$File/youth-one-stop-shop-evaluation-report-v1.1.pdf)

Clark, B.

Design of a roadside observation survey for measuring occupant behaviour and vehicle type characteristics

[Report]

Melbourne: Monash University Accident Research Centre, November 2009, 65pp. ISBN: 07326-2358-8
Report no.288

This survey design proposes a sound sampling framework that can be adapted to suit small or large scale research. Data observation forms are specifically designed to collect data on: vehicle information, driver and passenger characteristics, the presence and fitting of bull-bars, the use of mobile phones while driving, motorcyclist and bicyclist characteristics, and child restraint wearing. Roadside data collection procedures have been outlined and a detailed staff training manual has been included.

Report on road safety progress since 2000 [Strategy]

Wellington, N.Z. [Ministry of Transport] December 2009, 32pp. ISBN: 0478241429 This report provides a limited statistical review of the progress that has been made against the estimated reduction in social cost outlined in the Road Safety to 2010 consultation document. This document provided the framework for road safety actions and interventions for the last decade. It was released for public comment in 2000. The interventions identified in that document, and subsequently adopted, were progressed in three implementation packages in 2003, 2004 and 2007. The Executive Summary of this report and a Question and Answers page can be found via the website links below.

Who owns the roads? How motorised traffic discourages walking and bicycling

[Article]

Injury Prevention, December 2009, 15(6): 369-373

A literature review indicates an inverse relationship between increase speed and volume of traffic and levels of walking and cycling. This suggests that interventions which reduce speed and volume may increase walking and cycling

Grundy, C., Steinbach, R., Edwards, P., Green, J., Armstrong, B., Wilkinson, P.

Effect of 20 mph traffic speed zones on road injuries in London, 1986 - 2006: controlled interrupted time series [Article]

British Medical Journal, 10 December 2009, 339: b4469

The introduction of 20 mph (32 km) zones was associated with a 41.9% reduction in road traffic injuries, after adjusting for underlying time trends. The percentage reduction was greatest in younger children and greater for the category of killed or seriously injured casualties than for minor injuries. There was a small reduction in road traffic injuries in areas adjacent to the speed zones. These findings suggest that 20 mph zones are an effective means of reducing road traffic deaths and injuries. See also the editorial by Dr Shanthi Ameratunga.

Evaluation of the effectiveness of flexible barriers along Victorian roads [Report]

Melbourne: Monash University Accident Research Centre, June 2009, 33pp. ISBN: 07326-2361-8

Report no.291

Flexible barrier use is on the increase in Victoria as well as in many countries overseas. To date, little Victorian, or Australian, analysis has been undertaken of the effectiveness of these barriers in reducing, in particular, loss-of-control crashes. MUARC completed a before-and-after study of crashes at several Victorian sites treated with flexible barrier. The results are presented in this report.

Vehicle safety and young drivers Stages 2 and 3: Analysis of young driver crash types and vehicle choice optimisation

[Report]

Melbourne: Monash University Accident Research Centre, November 2009, 107pp. ISBN: 07326-2362-6
Report no.292

The overall aim of this study was to examine the implications of young driver (18 -24 years) vehicle choice on secondary safety outcomes. This was achieved by identifying patterns in vehicle choice by driver age and sex (Stage 1, see Watson & Newstead, in press), investigating the young driver crash profile (Stage 2), and developing and assessing scenarios for changing young driver vehicle choice to optimise road trauma outcomes (Stage 3). This report documents the outcomes of Stages 2 and 3.

Research was conducted in Australia and New Zealand. See also safety and young drivers, Stage 1 -

Evaluation of Youth One Stop Shops: final report [Report]

Communio, November 2009, 206pp.

The evaluation found that the fourteen YOSS provide a range of accessible, youth-friendly health and social services at little or no cost to young people. Youth specific services have evolved in response to local demand and have been supported by a range of funders and health providers. The most common health services provided include primary health care, sexual and reproductive health, family planning and mental health services. The majority of clients are aged between 15 and 24 years. Service utilisation is greater amongst females. A high percentage of Māori access services.
