

## Injury Prevention Information Centre

Formerly IPRC Information and Resource Unit

# A guide to the IPLit database

This fact sheet provides background information about the IPLit database to help you use this resource more effectively.

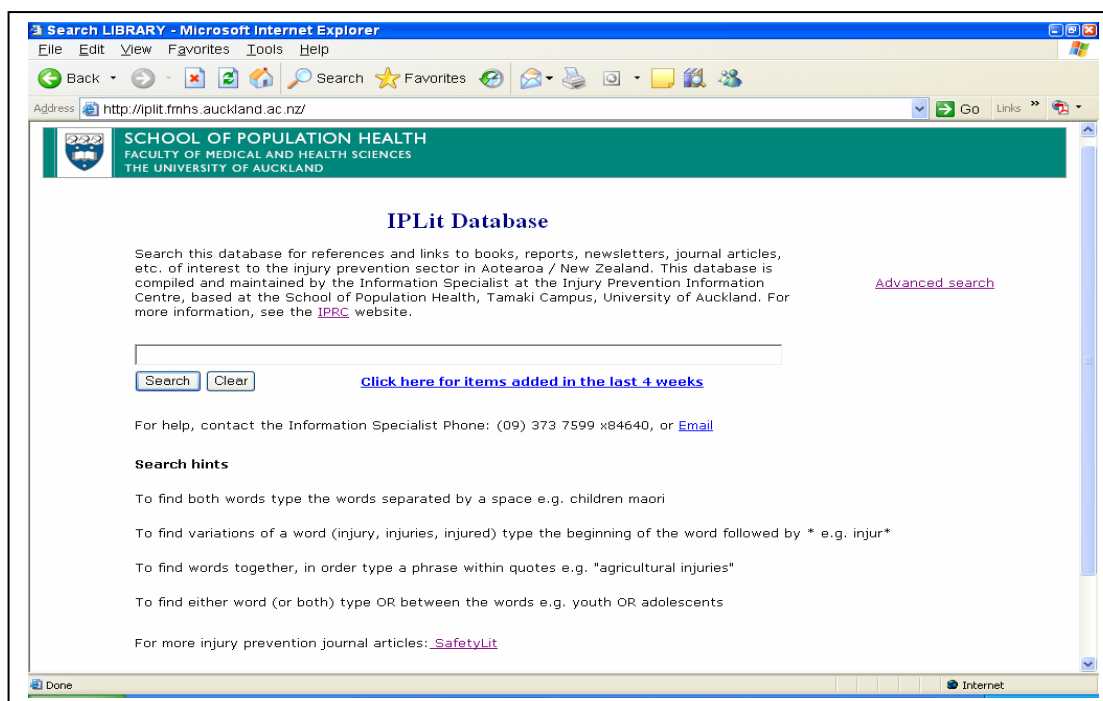

### What is IPLit?

IPLit is a research tool for the injury prevention sector in Aotearoa New Zealand. It is compiled and maintained by the Injury Prevention Information Centre's Information Specialist. IPLit is:

- a **catalogue** of the Injury Prevention Information Centre's (IPIC) library of books, reports, fact sheets and audiovisual material. You are welcome to visit IPIC at the University of Auckland's Tamaki Campus.
- an **index** of injury prevention research articles, reports, websites and newsletters.

### Why use IPLit?

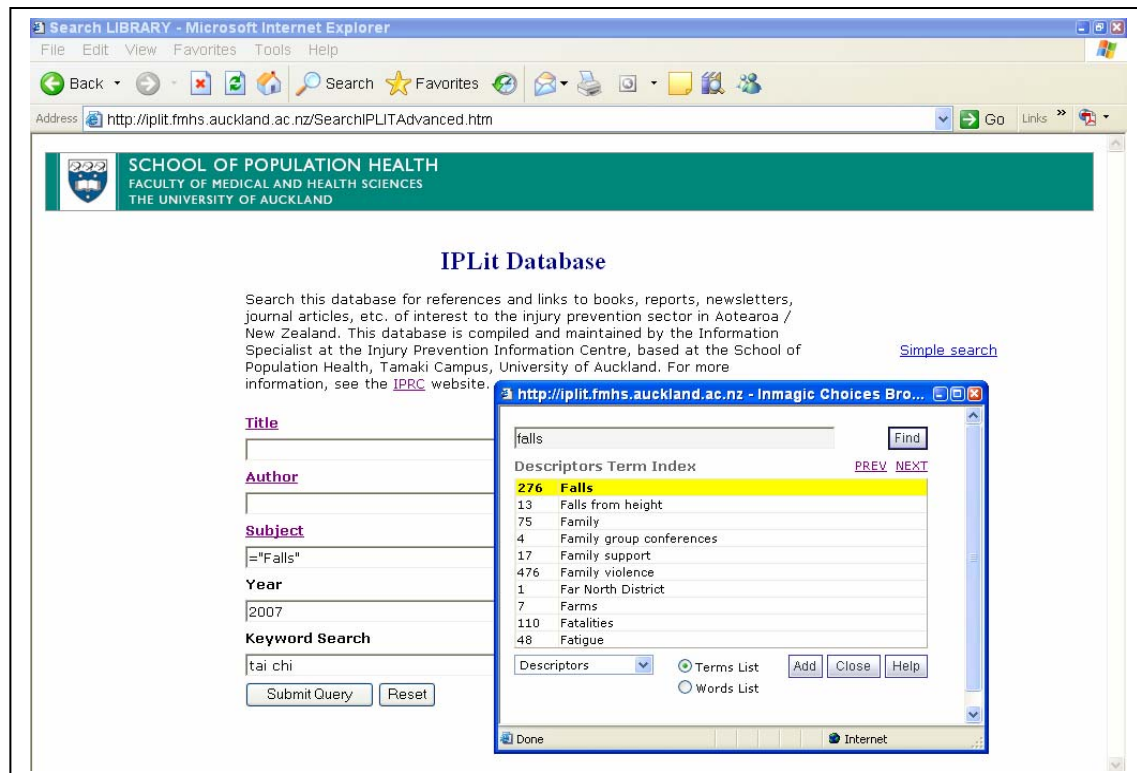

- IPLit saves time and frustration because all items are relevant to injury prevention and control, providing quick and easy links to many online resources.
- IPLit material is selected for its relevance to the the Aotearoa New Zealand injury prevention sector.
- A special effort is made to include all injury prevention research resources relevant to Māori and Pacific communities.

IPLit is just a click away at <http://iplit.fmhs.auckland.ac.nz>

Type any word or phrase here for a quick search or click on the link for items added in the last four weeks for recent material. Use Advanced search for more focused searching (see over for tips).

## Advanced Searching

Clicking on the links above the boxes will open a pick box like the one shown here. Type in the word or phrase you want to find and you will be shown the nearest available word/phrase. Click Add to include this term in your search box. If you put more than one term in a box, the default search will be OR – widening your search. To narrow your search with AND use & between terms instead. This search will find items identified as relating to falls which mention tai chi and were published in 2007.

The result of this search looks like this:

1.

Interventions to reduce fear of falling in community-living older people: a systematic review. (Article) by Zijlstra, G.A.; van Haastregt, J.C.; van Rossum, E.; van Eijk, J.T.; Yardley, L.; Kempen, G.I. Journal of the American Geriatrics Society, 55(4): 603-15, 2007.

[DOI \(Access may be limited\)](#)

Location: E-journals

DOI links are permanent links to journal articles provided by publishers. Clicking on this link should take you to the publisher's website and the article abstract, but unless your organisation subscribes to the electronic journal you may not be able to access the whole article. Journal articles should be requested from your organisation's library or your public library via inter-library loan.

For further help please contact the Information Specialist at the Injury Prevention Information Centre, Tamaki Campus, University of Auckland. Phone: (09) 373 7599 ext. 84640.
